Your swimming season just got longer! Why? Because you chose **the EcoTherm™ Swimming Pool with Swimsulate™ Technology**. The EcoTherm™ Pool keeps the water in your pool warmer for a longer period of time and can extend your swimming season up to 8 weeks, with no heater... and that's pretty cool!

The EcoTherm™ also gives you amazing versatility, allowing this pool to be installed **on-ground or semi-inground!** Every EcoTherm™ Pool is produced in North America and features a Vinyl Works deluxe liner, also manufactured in North America.

CAUTION: No Diving or Jumping.
Above ground pools are designed for swimming only.

Your family's security is our priority. Always ensure the proper supervision of children when around a swimming pool.

The EcoTherm™ Swimming Pool offers features and options not available with other pools. Here are just a few:

Ease of Installation

There is just no limit to the placement and installation of your EcoTherm™ Swimming Pool — it conforms to the landscape naturally. You, the landscape and/or local codes will help determine if you will install a semi-inground or onground pool. Your EcoTherm™ Pool can be installed on level ground, on a slope or into a hill, and will not require a retaining wall.

Coping Options

For onground installations, the EcoTherm™ Pool comes standard with our Universal Interior Finish Trac System (patent pending) that holds your interior finish in place. This coping comes with a double track to accommodate a winter cover as well. This option gives you the design flexibility for a wood, paver or cantilever deck. We also offer our Progressive coping for Semi-inground Installations, allowing for a concrete deck.

UNIVERSAL TRACK

PROGRESSIVE COPING

Snap-In Pool Cover

Because your EcoTherm pool coping comes with a double track, it allows for a snap-in pool cover. Aesthetically pleasing **and** it protects your pool from damage and debris in the off-season.

Interior Pool Finishes™

When all is said and done, your pool's interior finish is what people see the most. The EcoTherm™ Pool comes standard with a 25 gauge Fusion Tile interior finish. For an additional charge, we offer a wide selection of special order interior pool finishes™ as well. **Ask your dealer for details!**

Swimsulate™ Technology

The walls of The EcoTherm™ pool are engineered using a high performance technology. We create our AlumiPly™ walls using an exclusive bonding process that sandwiches a foam core, with R-10 insulating properties, between two aluminum panels. This results in a wall that is sturdy, non-corrosive and resists heat loss.

This also means your EcoTherm™ pool:

- Maintains water temperatures up to 10° warmer than conventional pools
- Extends your swimming season up to 8 weeks
- Saves on pool heating costs

The Finishing Touch

Step-N-Rest Entry System

For semi-inground pools with one end at ground or deck level, we offer the Saratoga Step. The Step-N-Rest is the only 52" step on the market today. It is a 4-tread thermoformed stair that offers easy pool entry and comfortable seating on each side for lounging and relaxation. What better place to start the little ones swimming with confidence? Each tread has a diamond anti-slip pattern molded in for safety. The Step-N-Rest is available in 8' straight or Radius models.

Decks and Stone Work

No matter which shape or installation you choose, you have the option to deck out your pool! For an inground pool, a nice 5/4 wooden deck for lounging is a good place to start. If you choose a semi-inground install on level ground, why not go for something more elaborate and consider one of many stone and concrete options? Whichever you choose, your family and friends will love it!
