

CoverLogix®
ADVANCED SAFETY COVER SYSTEMS

Installer and pool owner, please note:

IMPORTANT

Padding For Rough Coping, Deck or Windy Pool Locations

Excessive wear due to sharp edges, wind or loose installation is NOT covered under warranty. All covers should be kept tight and should be adjusted when unloaded sagging appears.

If the pool has sharp or rough coping edges, deck, and/or is in a windy location, the coping edges need to be padded at the time of installation.

To prevent chaffing damage and increase the life of your cover, we recommend the product Xtreme Protection. This pool cover padding easily snaps on to the perimeter and creates a protective barrier between the cover and deck.
